## **Caution**

### ■Overview

The vulnerability will be solved by deleting the specific template files in the install directory of Cybozu Share360.

### ■Impact

You cannot use Cybozu Share360 Reminder, Cybozu Share360 Sync for Palm OS(R), Cybozu Share360 Sync for Pocket PC, Cybozu Share360 Outlook Sync after you implement the following solution. If you want to continue using these applications, do not implement the solution.

## **Solution**

\*This solution is applicable to both Windows and UNIX environment.

### **■ Back up your original product data.**

1. Open Admin Tools > Share360 Account > Diagnostic Environment page in Share360.
2. Confirm the Executable Directory\*.

\*The value of the Executable Directory is the directory that contains the original Share360.

3. Save backup files of the followings:

- Files in the data directory
- Files in the file directory

### **■ Delete the specified template files.**

Delete the following two files from (install directory)\s360\page folder.

- SyncUserList.html
- RMOfficeUserSync.html

<Ex>

If you have installed Share360 in the default Windows IIS directory, delete the two files below from C:\Inetpub\Scripts\s360v2\s360\page folder.

- SyncUserList.html
- RMOfficeUserSync.html

<Caution>

Be sure to delete the template files. If you rename the files and leave them in the same folder or move them to different folder, the user list can still be obtained arbitrary using the new file name.
